

Improve Safety & Cut Damage Costs in Your Warehouse with Protect-a-RACK

"To improve OH&S and reduce on-going rack maintenance costs, we trialed a couple of rack protection systems in our warehouse. Our forklift operators expressed a strong preference for the Colby Protect-a-RACK, and it was also the most cost-effective solution, which made this a very easy decision."

Neville Tapp, Director of Operations, Avery Dennison

"The Colby Protect-a-RACKs have done their job superbly. Over the past 12 months, we have experienced minimal rack damage and enjoyed a safer workplace thanks to them, and Colby Storage Solutions' smart warehouse layout."

Terry Wicks, Distribution Centre Manager, Westgate Logistics

Comprehensive, cost-effective storage solutions, on time, nationwide

Even the best forklift drivers have accidental collisions with racking. While worst case scenarios involving a rack collapse are rare, impact damage weakens the racking structure, compromising its load carrying capacity and potentially putting both property and life at risk.

Protect your business and your people with Colby Protect-a-RACK ...

Designed to be fitted to just about every type of rack upright, the Colby Protect-a-RACK outperforms traditional steel and plastic rack protection systems through its unique, innovative design and ease of installation.

- Manufactured from heavy duty steel
- Versatile design fits any type of racking
- Simple, fast and cost effective installation
- Streamlined design maximises clear bay entry
- Certified and patented design.

Tapered surfaces deflect impacts & simplify bay entry.

Protect-a-RACK Standard

- Suitable for normal selective pallet racking with the first beam level above 1050mm
- 800mm high.

Protect-a-RACK Low Beam

- Suitable for double deep racking and longspan shelving with first beam at 300mm or 375mm
- Comes in two pieces which fit together snugly:
 - the base plate and
 - upright protector.

Wraps around, protecting upright from front, side and rear impacts.

Protect-a-RACK Carton Live Storage

- A specially notched version suitable for carton live storage racking with typical shelf levels
- Available for front and rear uprights.

Transfers impact forces into the racking brace nodes.

Bolted to upright, eliminating need for masonry anchors.

Protect-a-RACK Base

- Two types of Protect-a-RACK Base are available:
 - Integrated unit combining a baseplate for the rack upright and a low-rise protector
 - OR a low-rise retrofit unit to suit existing installations.
